[How the Tropic of Cancer and Tropic of Capricorn Were Named](#)

When the Tropic of Cancer was first named about 2,000 years ago, the sun was pointed in the direction of the constellation of Cancer during the June solstice. The name stuck, even though the location of the sun has shifted and now resides in the constellation of Taurus during that time of year. Now That's Interesting . Because there's a greater concentration of land in the Northern Hemisphere ...

On our planet, solstices are defined by solar declination—the latitude of the Earth where the sun is directly overhead at noon. On Earth, solstices are twice-yearly phenomena in which solar declination reaches the Tropic of Cancer in the north and the Tropic of Capricorn in the south. During the June solstice (marked between June 20 and June 22), solar declination is about 23.5 ° N (the ...
